

Quick Start Guide

Being five times faster than the speed of 802.11b network standard devices, the innovative 802.11g standard lets the wireless network become incredibly faster (up to 54Mbps) than ever. Your 802.11b/g Wireless LAN Adapter certainly will bring you into such a high-speed networking sphere. The easiness of installation and configuration add up more enjoyments while you are operating the network in either an independent mode or an infrastructure mode. The former, which is also known as peer-to-peer or ad-hoc network, lets you directly make connection with other wireless-equipped computers, and the later, the so-called infrastructure network, allows you to communicate with wired LAN via an access point.

To have your 802.11b/g Wireless LAN Adapter appropriately installed, please read this guide carefully.

Installation Procedure

1. Insert the 802.11b/g Wireless LAN Adapter into your computer. The **Found New Hardware Wizard** dialog box will appear because the system has detected the insertion of the Card.
2. In the **Found New Hardware Wizard** dialog box, choose **Cancel** to proceed.
3. Insert the supplied CD into your CD-ROM drive, and the InstallShield Wizard will automatically start the driver installation. If it does not, double-click **setup.exe** under the CD's directory to execute it.
4. In the prompted **WLAN-G IEEE802.11b/g Setup** window, choose **Next** to continue.
5. The system will start to copy the drivers found. It may take a couple of minutes.
6. Windows will notify you that the driver has not passed Windows Logo testing. Because the Card has been tested to work with Windows XP, please choose **Continue Anyway**.
7. From the **Install Finished** screen, if you are operating Windows 98 or ME, choose **Yes, I want to restart my computer now**; on the other hand, if your current system is Windows 2000 or XP, choose **No, I will restart my computer later** instead. Then click **Finish** to finish the installation.
8. Then you will find the **WLAN-G Configuration Tool** icon appeared in the system tray. Now, the installation is entirely completed.

For more details about the first-time connection to the network or about the program, please refer to the *User Manual* on the supplied CD.
